

A. Fixed vs Random Effects Comparison

Estimates of key interactions: random effects correct for intra-individual dependence

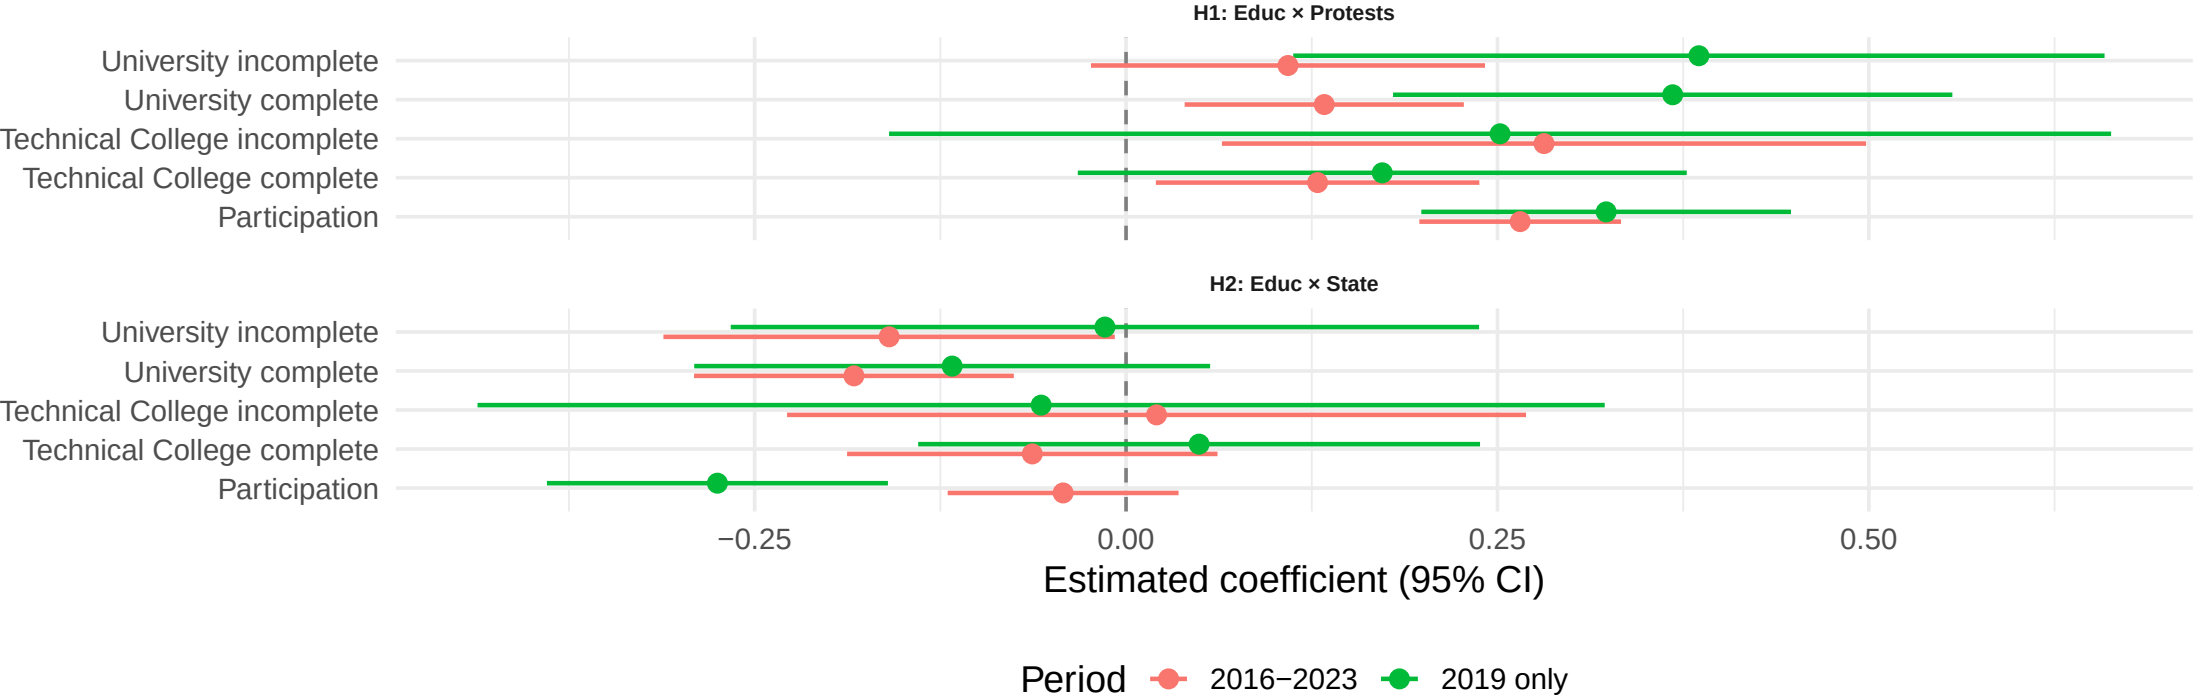

B. Sensitivity: Excluding 2019 (Social Outbreak)

Robust results: key interactions persist without the outbreak year

C. Comparison: Effects in 2019 vs Full Period

Interactions amplified in 2019 but present throughout the full period

Panel A: Random effects correct SE underestimation in fixed effects. Panel B: Robust results without 2019. Panel C: 2019 amplifies but does not create effects. Compiled by the author based on ELSOC 2016–2023.
